Usability test session script – Gedara working app

IT3060 Milestone 03 · Facilitator: IT22923042 · Read the left column word for word. The right column says what the participant does; their answers must be their own, real answers. Nothing in this script is a result: write only what you really see and hear.

Participant code U____	**Role(s)** Customer / Provider / Admin	**Date** _____	**Device** _____

A. Set-up checklist

A1. Once, on the day of the sessions (allow 30 minutes)

☐ **Start the server** from the *server* folder, with the test-reset switch on (Node 20 or newer):

```
macOS / Linux : ALLOW_TEST_RESET=1 npm start
Windows (PowerShell) : $env:ALLOW_TEST_RESET=1; npm start
```

It prints “Gedara API listening on http://0.0.0.0:4000”. Without `ALLOW_TEST_RESET=1` the reset address does not exist. In that case stop the server, run `npm run seed` (deletes the database and creates fresh demo data) and run `npm start` again between participants.

☐ **Reset the data on the same day** (see A2 step 1). The demo bookings are dated “today” when they are created, so data created yesterday shows the wrong “Today” slots and the wrong “Next free”.

☐ **Start the app** from the *app* folder: `npx expo start`. Laptop and phone must be on the same Wi-Fi (or the laptop’s hotspot). For the administrator on a laptop use `npx expo start --web` and open the address it prints (usually http://localhost:8081): the wide window shows the desktop layout with a side menu.

☐ **Find the laptop’s IP address** (`ipconfig` on Windows, `ifconfig` on macOS or Linux), for example 192.168.1.20. Open `http://192.168.1.20:4000/api/health` in the phone’s browser: it must show {"ok":true}. If not, the laptop firewall is blocking port 4000 or the phone is on another network.

☐ **Connect the phone.** Expo Go: scan the QR code from the Expo terminal; the app finds the server by itself (laptop address, port 4000). APK (EAS build profile “preview” makes an APK): install it, then **always** set the address by hand, because an APK cannot guess it.

☐ **If the Login screen shows “Cannot reach the Gedara server…”:** scroll to the bottom of the Login screen, tap **Server settings**, type `http://192.168.1.20:4000` (your laptop’s address) into **Server address**, tap **Save address**. The line “Saved. Using …” confirms it. Android may refuse plain http:// in an APK: test this before the first participant. If it fails, use Expo Go.

☐ **Photos for T3:** put 3 harmless pictures in the phone’s gallery (an object, a tap, a sink: no people, no faces, no personal information). Decide whether participants use their own phone (they meet the real permission prompt) or your test phone (grant access beforehand) and keep to one choice. Write it on every observation sheet.

☐ **Recording:** test screen recording with microphone (iPhone: Control Centre, long-press record, microphone on; Android: built-in screen recorder with microphone; laptop or video call: share screen and record). Check free storage. Do not start recording before consent.

☐ **Print:** this script, plus per participant one observation sheet (landscape) and one SUS form. Bring a pen and a timer (phone stopwatch).

☐ **Pilot:** do all ten tasks yourself once, following the criteria below. Never put pilot data in the workbook.

A2. Before every participant

☐ **Reset the demo data.** In a terminal on the laptop:

```
curl -X POST http://localhost:4000/api/test/reset
Windows PowerShell: curl.exe -X POST http://localhost:4000/api/test/reset
```

The answer is {"ok":true}. Every booking, request, complaint, block and approval made earlier is gone and the seed data (dated today) is back. Saved sign-ins stay valid.

☐ **Sign the device out** (the app remembers the last sign-in, so the previous role is still open): Customer: Home → scroll down → “Sign out (Dilani)”. Provider: “Profile” tab → “Sign out”. Admin: Dashboard → log-out icon, top right.

☐ **Sign in for the participant** with the demo account for the role (table below): tap the chip under “Demo accounts” (Customer, Provider or Admin), then “Sign in”. Signing in is set-up, not a task: do it yourself, but note if they would have hesitated. The password is **gedara123**.

☐ **Read the changing values off the screen** and write them on the observation sheet: (a) Nimal’s “Next free” line, from his profile (for T2); (b) the weekday three days from today (for T8); (c) the “Open complaints” number on the admin Dashboard before T10 (2 after a reset).

☐ Phone on silent and “Do not disturb”, brightness up, other apps closed. Start the stopwatch only when you finish reading a task.

Why reset so often. The tasks change data: T3 books a slot, T6 opens a complaint (it would become the first case in the admin list and add one to the open count in T10), T7 accepts a request, T9 approves Saman. Reset at the start of every participant **and** whenever the same participant changes role: before T7 (customer to provider) and before T9 (provider to administrator), then sign out and sign in with the next account. **Do not reset in the middle of a role block**: T4 needs the request made in T3.

A3. Demo accounts and seeded data (facilitator reference: do not tell the participant)

Role	Login (password gedara123)	Tasks	What the seed gives you
Customer	dilani@gedara.lk Dilani Perera	T1 to T6	Address and phone are pre-filled. One finished job: Tap or mixer repair with Nimal Perera, LKR 4,200, 24 days before the reset day (the date shown in “Bookings → Past” moves with the reset day). No other booking.
Provider	nimal@gedara.lk Nimal Perera	T7, T8	Two “New” requests: **Blocked kitchen drain** (Anusha M., Tomorrow 9:00 am, 2 photos, price 4500) and **Water heater leak** (Rohan D., day after tomorrow 2:00 pm, price 8000). Booked: Today 9:00 am, 11:00 am, 2:00 pm and Tomorrow 11:00 am. Sunday 9:00 am is blocked.
Admin	ruwan@gedara.lk Ruwan Jayawardena	T9, T10	3 pending applications: Saman Jayasinghe, Dinesh Kumara, Anusha Mendis. Complaints: C-1038 Price changed (New), C-1039 No-show (In review), C-1035 Poor quality (Resolved): **Open complaints = 2**.

Plumbers in the results (best rated first): Nimal Perera 4.8 (verified, “From LKR 2,500”; Tap or mixer repair LKR 3,500 to 5,500), Kasun Fernando 4.6 (verified), Saman Jayasinghe 4.3 (“Not yet verified”). Next free for Nimal on the reset day: “Today 4:00 pm”. “Pick a time” shows 4 days (Today, Tomorrow and two more); the provider Calendar shows 7 days.
Things to know so you can stay quiet: photos are not uploaded (the app records only that a photo was added; the provider sees placeholder tiles); the admin’s document tiles are placeholders that cannot be opened; “Next free” ignores the time of day, so after 4 pm it can still say “Today 4:00 pm”; a calendar block repeats every week. These are app limits, not participant errors: note what the participant says about them.

B. Opening and consent (4 min)

YOU SAY (facilitator)	PARTICIPANT DOES / SAYS (their own words)
“Hi, thanks for helping. Can you hear me, and is this phone (or laptop) comfortable to use?”	Confirms.
“I’m testing a working version of a home-service booking app called Gedara for my university course, IT3060 at SLIIT. It tests the app, not you. You can’t do anything wrong. I built this app myself, so please be honest: you won’t hurt my feelings.”	Listens.
“Please think out loud: tell me what you see, what you expect to happen and anything that confuses you. I won’t help during the tasks, but I’ll be listening. You can stop at any time without giving a reason.”	Listens, may ask questions.

YOU SAY (facilitator)	PARTICIPANT DOES / SAYS (their own words)
“Everything in the app is invented: the people, the prices, the bookings. Nothing is sent or paid. If you choose a photo, it stays on your phone. Please don’t type any real personal details.”	Listens.
“Two questions. First: do you agree to take part? You can stop at any time, and ask me afterwards to delete your results.” **Tick on the observation sheet.**	Says **Yes** or **No** in their own words. If No: thank them and stop.
“Second: may I record your screen and your voice, only so I can check my notes? You will appear only as **U**__. Please don’t say your surname, phone number or address. The recording will be seen by **[tick the true one]** ☐ only me and the people who mark my coursework, ☐ anyone with the link, because my assessors open it that way. I may quote your comments without your name. You can ask me to delete it until I submit.”	Says **Yes** or **No**. If No: **no recording**, take written notes only; they can still take part.
Only if Yes: start the recording. “The recording is running. Please say ‘yes, I agree’ once more so it is on the recording.”	Says it. (Delete the clip if they change their mind.)

C. Background questions (2 min): write the answers on the observation sheet

YOU SAY (facilitator)	PARTICIPANT DOES / SAYS (their own words)
“Which age group are you in: 18 to 24, 25 to 34, 35 to 44, 45 to 54, or 55 and over?”	Age group. (Adults only: do not test anyone under 18.)
“Which phone or computer are you using today?”	Device.
“In the last year, how often did you hire a plumber, electrician or cleaner?”	Own answer.
“How do you usually find them: a relative, a neighbour, social media, an advert, or something else?”	Own answer.
Providers only: “What is your trade, and how do you take bookings now?” *Administrators only:* “Have you ever checked someone’s documents or handled a complaint?”	Own answer.

D. Tasks (about 20 to 25 min)

Customer tasks T1 to T6, then provider T7 and T8, then administrator T9 and T10, as the participant's time and role allow. Not every participant has to do every role: **log only the tasks that were really attempted** and say on the Participants sheet if someone role-played a provider or an administrator.

Start. Say "Please start from [start screen]" if needed, read the task word for word, start the timer when you finish reading. Say nothing else.	**Stop.** Stop the timer when the goal screen is on screen or the participant says they are done. Time counts for Success only.
Stuck. If the participant is stuck for 60 seconds say "Let's move on" and mark **Fail**. If they ask for help say "What would you do if I weren't here?".	**Outcome. Success** = done unaided. **Partial** = done after a hint or a detour. **Fail** = not done. Any hint you give: tally it as H.
Error = a tap that leads away from the goal, an error or validation message the participant triggers, or going back to undo something. Tally each on the sheet.	**Not an error.** A crash, a network message or a slow answer from the server is a fault of the app: write "tech fault", reset if needed and repeat the task. Do not count it.

Thresholds (M02 report section 6.4): Success on at least 80 % of attempts per task, time at or under the target shown for each task, at most 2 errors per task (T1: 0 wrong turns), mean SEQ at least 5.5, mean SUS at least 68, no open High issue. Every target is **unchanged from the M02 kit except T3** (150 s instead of 120 s, see T3).

T1 · Customer · sign in as dilani@gedara.lk · start: Home · FR1, FR2, NFR4

YOU READ ALOUD

"You need a plumber for a leaking tap. Find a provider you would trust, with a rating of 4.5 or higher, and open their profile."

Expected path (do not tell): Home → "Plumbing" tile (or type "leaking tap" and press Search) → results list, best rated first (filters "Verified only", "4.5 and above", "Free today") → tap a card.

Watch for: What they look at to decide on trust (rating, "Verified" pill, years, reviews). Do they use the "4.5 and above" or "Verified only" chip? Do they notice that "From LKR 2,500" is not the job price?

FACILITATOR CRITERIA

Success: The "Provider profile" screen of **Nimal Perera** (4.8) or **Kasun Fernando** (4.6) is open. Both are verified and rated 4.5 or more.

Partial: Gets there only after a hint, or after opening a wrong profile and going back.

Fail: Opens **Saman Jayasinghe** (4.3, "Not yet verified"), or is stuck for 60 s.

Target: ≤ 45 s, 0 wrong turns (unchanged from M02: 45 s, 0 wrong turns).

T2 · Customer · sign in as dilani@gedara.lk · start: Nimal Perera's profile (you open it) · FR3, FR4

YOU READ ALOUD

"On Nimal Perera's profile, tell me roughly what a tap repair costs and when he is next free."

Expected path (do not tell): Scroll the profile to "Price estimates" (row "Tap or mixer repair") and to "Availability" (the hint reads "Next free: …").

Watch for: Do they find the range or settle for "From LKR 2,500"? Do they understand "Provider confirms the final price"? Do they use the Availability card (Today and Tomorrow rows) or the hint?

FACILITATOR CRITERIA

Success: States **LKR 3,500 to 5,500** for the tap or mixer repair and the next free time shown on the screen. The time is dynamic: read the "Next free" line before the task and write it on the observation sheet (seeded data on the day of the reset: "Today 4:00 pm").

Partial: Only one of the two is right (for example quotes "from LKR 2,500", the starting price on the button and in the results list).

Fail: Both wrong, or stuck for 60 s.

Target: ≤ 30 s, ≤ 2 errors (unchanged from M02: 30 s from the profile).

T3 · Customer · sign in as dilani@gedara.lk · start: Nimal Perera's profile (where T2 ended) · FR3, FR4, FR5, FR13, NFR2, NFR5

YOU READ ALOUD

"Book Nimal Perera for a leaking kitchen tap. Add one photo and choose a time that suits you."

Expected path (do not tell): "Request booking from LKR 2,500" → **Step 1 of 2** "Describe the job": chip "Leaking tap" or typed text, "Add photo" (gallery picker); address and contact number are already filled from the demo account → "Next: pick a time" → **Step 2 of 2** "Pick a time": day chip (Today, Tomorrow and two more days), a free slot (booked slots are struck through), "Pay after the job" Cash or Card → "Send request".

Watch for: Photo: permission prompt, which photo, can they tell it was added? Validation message "Describe the problem so the provider can prepare." Tapping a "Booked" slot. Do they read the pay choice and the price note? Do they understand "Step 1 of 2"?

FACILITATOR CRITERIA

Success: The "Your booking" screen shows **"Waiting for provider"** for Nimal Perera, and the "Photos" line on step 2 showed **1** before they pressed "Send request" (glance at it). The time they chose is the one shown under "When".

Partial: Request sent without a photo, or only after a hint.

Fail: No request is sent, or stuck for 60 s.

Target: ≤ 150 s, ≤ 2 errors (ADJUSTED from 120 s to 150 s: the working app opens the phone's own photo permission prompt and gallery, which the M02 prototype did not have. Errors limit unchanged (2)).

T4 · Customer · sign in as dilani@gedara.lk · start: Home (the request from T3 exists) · FR7, FR8, NFR3

YOU READ ALOUD

“You already sent a booking request. Ask the provider whether there is parking, then check whether he has accepted.”

Expected path (do not tell): “Bookings” tab → the booking card (“Upcoming”) → “Message” → type a message or tap the quick reply “Is parking available?” → Back → read the status pill. (Also valid: “Messages” tab → the conversation.)

Watch for: Do they find the booking again from Home? Do they notice the lock note “Phone numbers stay hidden until the provider accepts” and “Shown after acceptance” (NFR3)? Do they expect a reply to arrive by itself?
If T3 failed: before T4, send a request yourself (Nimal, Tomorrow 2:00 pm) and write “T3 request made by facilitator” in the notes.

FACILITATOR CRITERIA

Success: A parking question is visible in the chat thread (typed text or the quick reply) and they say the request has **not** been accepted yet (“Waiting for provider”).

Partial: Message sent but the status is wrong or unsure, or only after a hint.

Fail: No message sent, or stuck for 60 s.

Target: ≤ 60 s, ≤ 2 errors (unchanged from M02: 60 s).

T5 · Customer · sign in as dilani@gedara.lk · start: Home · FR12

YOU READ ALOUD

“Book the plumber who repaired your kitchen tap a few weeks ago again, for a new problem of your choice. You do not need to send it.”

Expected path (do not tell): Home → “Book again” card → “Book Nimal again” (or “Bookings” → “Past” → “Book again”) → “Describe the job” opens.

Watch for: Do they see the “Book again” card without scrolling? Do they find it in “Bookings → Past”? The unsent request stays in “Bookings” as “Not sent”: do they notice it?

FACILITATOR CRITERIA

Success: Step 1 of 2 “Describe the job” is open for **Nimal Perera**, reached from “Book Nimal again” or from “Bookings → Past → Book again”. Stop the clock when it is on screen, then ask what they would type.

Partial: Gets there only after a hint, or by searching for Nimal again from the results list.

Fail: Starts a request with another provider, or stuck for 60 s.

Target: ≤ 45 s, ≤ 2 errors (unchanged from M02: 45 s).

T6 · Customer · sign in as dilani@gedara.lk · start: Home · FR10, NFR6

YOU READ ALOUD

“The plumber who repaired your tap a few weeks ago did poor work. Report the problem and tell me what happens next.”

Expected path (do not tell): “Bookings” tab → “Past” → the completed job with Nimal Perera → “Report” → choose a reason (“Provider did not show up”, “Price changed after the job”, “Poor quality work”, “Safety or fraud concern”) → “Details” (at least 5 characters) → “Send report”.

Watch for: “Send report” stays disabled until a reason is chosen: do they understand why? Validation message “Tell us briefly what happened.” Do they pick “Poor quality work”? Afterwards the card in “Bookings” shows “Case C-####: New. We reply within 24 hours.”

FACILITATOR CRITERIA

Success: The card **“Case C-#### opened”** is shown (a reason and details were sent) and they say an administrator will review it (the card says within 24 hours) and that they can follow the status.

Partial: Case opened but they cannot say what happens next, or only after a hint.

Fail: No report is sent, or stuck for 60 s.

Target: ≤ 60 s, ≤ 2 errors (unchanged from M02: 60 s).

Role change: if the same participant now does provider tasks, **reset the data** (A2 step 1), sign out of the customer account and sign in as nimal@gedara.lk before T7.

T7 · Provider · sign in as nimal@gedara.lk · start: “Requests” tab · FR5, FR6, FR8

YOU READ ALOUD

“You are a plumber. A customer, Anusha M., sent a request about a blocked kitchen drain. Open it, check the details and accept it.”

Expected path (do not tell): “Requests” → card “Blocked kitchen drain · Anusha M. · Tomorrow 9:00 am · 2 photos” (pill “New”) → “Request details” (problem, photos, “Your price” already filled with 4500) → “Accept request”.

Watch for: Do they read problem, photos and time before accepting? There are two “New” requests, so is the right one found? Do they notice “Shown after you accept” on address and phone (NFR3)? The photos are placeholder tiles (“Photo 1”, “Photo 2”): note any comment.

FACILITATOR CRITERIA

Success: The request **Blocked kitchen drain** is **Accepted**: toast “Accepted. The customer can now see your price.”, the button “Mark job complete” appears, and the address and phone are shown.

Partial: Accepted after a hint, or after opening the other request first.

Fail: Accepts or declines **Water heater leak** (Rohan D.) instead, declines the drain request, or stuck for 60 s.

Target: ≤ 40 s, ≤ 2 errors (unchanged from M02: 40 s).

T8 · Provider · sign in as nimal@gedara.lk · start: “Calendar” tab · FR4, FR6, NFR5

YOU READ ALOUD

“You are visiting family on [say the weekday of the day three days from today] afternoon. Make sure customers cannot book you at 2 pm or 4 pm that day.”

Expected path (do not tell): “Calendar” (“Availability”, next 7 days) → tap the “Free” cell for 2 pm and for 4 pm on that day → the cells show “Blocked” and the toast says “Blocked every … Customers cannot book it.”

Watch for: Blocks repeat every week (“Blocked every Fri”): do they notice or object? Tapping a blocked cell again unblocks it: count it as an error. Tapping a “Booked” or “Request” cell only shows a toast. Optional check at the end: customer login, Nimal, “Pick a time”: both slots show “Booked”.

FACILITATOR CRITERIA

Success: Both cells (2 pm and 4 pm on the target day) show **“Blocked”** and no other cell was changed.

Partial: Both blocked but also blocked or unblocked another cell, or only after a hint.

Fail: Only one slot blocked, or none, or stuck for 60 s.

Target: ≤ 45 s, ≤ 2 errors (unchanged from M02: 45 s. The weekday is dynamic (M02 used Saturday): say the weekday of the day three days from today).

Role change: before T9 **reset the data** again and sign in as ruwan@gedara.lk (use a laptop browser for the wide layout if you can). Write the Dashboard “Open complaints” number on the sheet before T10.

T9 · Administrator · sign in as ruwan@gedara.lk · start: “Dashboard” (the first tab) · FR9, NFR4

YOU READ ALOUD

“You are the administrator. Check the documents of the new plumber Saman Jayasinghe and approve him.”

Expected path (do not tell): “Verification” tab (“Pending”, 3 applications; Saman Jayasinghe is first) → documents “National ID” and “Trade certificate” → tick the 4 checks → “Approve provider” (disabled until all four are ticked).

Watch for: The document tiles are placeholders (“National ID”, “Trade certificate”) and cannot be opened. Do participants say they cannot really check anything? There are 4 checks but 2 documents (“Photo of work is genuine”). Do they notice that “Approve provider” is disabled, and why?

FACILITATOR CRITERIA

Success: Saman Jayasinghe is approved (toast “Saman Jayasinghe approved. Now shows a verified badge.”, and he is listed under “Approved”) with all four checks ticked.

Partial: Approved after a hint, or after opening the wrong application first.

Fail: Approves **Dinesh Kumara** or **Anusha Mendis** by mistake, rejects Saman, or stuck for 60 s.

Target: ≤ 90 s, ≤ 2 errors (unchanged from M02: 90 s).

T10 · Administrator · sign in as ruwan@gedara.lk · start: Wherever T9 ended (“Verification”) · FR3, FR10, FR11, NFR6	
YOU READ ALOUD **“Open the complaint about a changed price and settle it by refunding the customer. Then tell me how many complaints are still open.”** **Expected path** (do not tell): “Complaints” tab (filters “All”, “New”, “In review”, “Resolved”) → case **C-1038 Price changed** (Rohan D. reported Kasun Fernando; first in the list and already open) → “Outcome”: **“Refund customer”** (others: Partial refund, Warn provider, Suspend provider, No action) → “Mark resolved” → “Dashboard” tab → “Open complaints”. **Watch for:** “Message both sides” (moves the case to “In review”) is optional: do they think it is required? “Mark resolved” is disabled until an outcome is chosen: do they see why? “Open complaints” counts New plus In review; on the phone layout it appears twice (tile and “Needs attention”).	**FACILITATOR CRITERIA** **Success:** C-1038 is **Resolved** with outcome **Refund customer** (toast “Resolved. Both sides were notified.”) and they read the Dashboard count correctly: **one fewer than before** (seeded data: 2 before, **1** after). Write the count shown before the task on the observation sheet. **Partial:** Resolved with another outcome (for example “Partial refund”), or the count is wrong or was not looked up, or only after a hint. **Fail:** Resolves or dismisses a different case, or stuck for 60 s. **Target:** ≤ 90 s, ≤ 2 errors (unchanged from M02: 90 s).

After every task: the SEQ question

YOU SAY (facilitator)	PARTICIPANT DOES / SAYS (their own words)
After every task: “Overall, how difficult or easy was that task, from 1, very difficult, to 7, very easy?”	Gives a number from 1 to 7. Write it down. Ask it after Fail and Partial too.

E. System Usability Scale (3 min)

Say: “Now ten short statements about the app as a whole. For each one, circle a number from 1, strongly disagree, to 5, strongly agree. Go with your first reaction.” Hand over the SUS form (next page) or read the statements aloud and circle for them. If the participant only did some roles, they rate the app they used.

F. Post-test questions (5 min): write their own words

YOU SAY (facilitator)	PARTICIPANT DOES / SAYS (their own words)
“What was the easiest part, and what was the most confusing part?”	Own answer.
“Did you feel you could trust the providers shown? What made you trust or doubt them: the rating, the Verified label, the reviews, something else?”	Own answer.
“Who could see your phone number and your address, and when?” *(Listen for “after the provider accepts”.)*	Own answer.
“How would you expect to pay for the job? Did the Cash or Card choice make sense?”	Own answer.
“Customers: how did adding the photo go? Providers: what did you think of the photo tiles? Administrators: could you really check the documents?”	Own answer.
“Was there a moment you wanted to ask for help, or a message that did not make sense?”	Own answer.
Providers and administrators: “How does this compare with how you do it now?”	Own answer.
“Would you use this app for a real job? Why or why not?”	Own answer.
“What is one thing you would change first?”	Own answer.
“That is the end of the test. Thank you very much, it really helps. I will stop the recording now.” **Stop the recording.** “Do you want to ask me anything? Do you still agree that I may use your results?”	Says goodbye.

System Usability Scale – participant form

Participant code U____ Role(s) used: Customer / Provider / Admin Date: _____

Please circle one number for each statement, from **1 = strongly disagree** to **5 = strongly agree**. Give your first reaction; there are no right or wrong answers. The statements are about the Gedara app.

	Statement	1	2	3	4	5
1	I think that I would like to use this app frequently.	1	2	3	4	5
2	I found the app unnecessarily complex.	1	2	3	4	5
3	I thought the app was easy to use.	1	2	3	4	5
4	I think that I would need the support of a technical person to be able to use this app.	1	2	3	4	5
5	I found the various functions in this app were well integrated.	1	2	3	4	5
6	I thought there was too much inconsistency in this app.	1	2	3	4	5
7	I would imagine that most people would learn to use this app very quickly.	1	2	3	4	5
8	I found the app very cumbersome to use.	1	2	3	4	5
9	I felt very confident using the app.	1	2	3	4	5
10	I needed to learn a lot of things before I could get going with this app.	1	2	3	4	5

1 = strongly disagree · 3 = neither · 5 = strongly agree

Facilitator: type the ten numbers into the SUS sheet of the workbook (row = participant code). The score is calculated there: odd statements answer minus 1, even statements 5 minus answer, add the ten and multiply by 2.5 (0 to 100). Do not score unfinished forms: leave a form with a missing answer as it is (the sheet shows no score).

Observation sheet – one per participant

Code U____	**Date** _____	**Device** iPhone / Android / Laptop	**Connection** Expo Go / APK / Browser	**Phone** own / test	**Age group** 18-24 25-34 35-44 45-54 55+

T10 Admin ≤ 90 s							

Top problems seen (one line each; log in the Issues sheet)

1. _____

2. _____

3. _____

Severity
High: stops the task, wrong outcome (such as a double booking) or damages trust.
Medium: slows or confuses, but they recover; or a Low issue that affects half or more of the participants.
Low: cosmetic, wording or preference; no effect on finishing.
Error = a tap leading away from the goal, an error message triggered, or going back to undo. **Tech fault** is not an error.

Ethics and data note

Keep this with the script. It applies to every session.

- ☐ **Anonymous codes.** Participants are U1, U2, U3, U4, U5 (and U6 onwards if you test more). No names, phone numbers or addresses go on the observation sheets, in the workbook, in file names or in the report. Keep no name-to-code list unless your course asks for signed consent forms; if it does, store those forms apart from the data.
- ☐ **Adults only, voluntary.** Test only people aged 18 or over. Nobody is pressed, paid or rewarded for a particular answer. They can stop at any time and ask for their results and recording to be deleted until you submit. Friends and family may take part, but say so honestly in “Real background” on the Participants sheet, and do not coach them.
- ☐ **Consent first, recording only with consent.** Ask the two consent questions in section B before anything is recorded. If the answer to recording is No, take written notes only. Start the recording only after a Yes, and capture the Yes on the recording. Say aloud who will see the recording (the consent text has the two options) and keep to what you said.
- ☐ **Fake data only.** Everything in the app is invented and nothing is sent or paid. The address and phone are pre-filled for the demo customer. The photo chosen in T3 stays on the phone; the app records only that one photo was added. If a participant says a surname, phone number or address on the recording, cut that part out.
- ☐ **Storage and sharing.** Name files U1_customer.mp4, U2_provider.mp4 and so on. Keep them in the folder you will submit, shared only as described to the participant. Do not post clips publicly or use them for anything else.
- ☐ **Honest results.** You built the app, so you are biased. Do not defend it, explain it or hint during tasks. Record failures, hints and tech faults as they happen, report every participant who took part (including bad results) and never invent, copy or adjust a participant, a time or a rating. A task that was not attempted is left blank, not guessed. If fewer than 5 consenting participants take part, say so in the report.
- ☐ **Privacy of the app itself.** Participants may notice that phone numbers are hidden until a provider accepts (“Shown after acceptance”). Note their comments on this: it is part of requirement NFR3.

After every session

- ☐ Save the recording as **U__role.mp4** (for example U3_customer.mp4), only if the participant said Yes to recording. No names in file names.
- ☐ Sign the device out. Reset the data before the next participant.
- ☐ Within the same day: type the observation sheet and SUS form into the workbook (Participants, Task log, SUS, Issues). Only real data: leave unattempted tasks blank. Then keep or shred the paper sheets as your course requires.
- ☐ Log each problem in the Issues sheet with a severity from the table on the observation sheet.
